

FAST FACTS

64% DSL Coverage

The map illustrates the areas covered by broadband over DSL within Rhode Island. According to data provided to Broadband RI by the five identified Broadband Providers servicing business and residential customers; 64% of the census blocks within Rhode Island have broadband technology available to them via DSL.

Typical connections allow users to send and receive data at speeds between 25 and 50 Mbps, though actual speed is determined by the proximity to the providers central office.

Rhode Island Broadband Digital Subscriber Line (DSL) Coverage

This map features Broadband Rhode Island data effective December 31, 2013. Basemap courtesy of Esri. This map is not a survey. This is an NTIA project.
